

Today's agenda

↳ quizzes & learning

Quiz 1:

→ `int x = 10;`

Syntax to declare the variable?

- a) `type variable-name = value;` ✓
- b) `variable-name type = value;`
- c) `variable-name = value;`
- d) None of the above.

Quiz 2:

Declare an int variable with name `y` and value `20`?

- a) `Int y: 20;` xx
↳ `int y = 20;` → (C)

Quiz 3

`int a = 10;`

`int b = 20;`

`System.out.println(a+b);` → 30

10

a

20

b

Quiz 4:

```
int a = 20;
```

```
int b = 30;
```

```
System.out.println(a + " " + b);
```

↳ 20 30

→ removed from
reader board

Quiz 5:

```
int temp: 10;
```

```
System.out.println(Temp);
```

↳ error

Quiz 6:

```
System.out.println(a);
```

```
int a = 10;
```

↳ error

Quiz 7:

```
int a = 20;
```

```
int a = 30;
```

```
System.out.println(a);
```

↳ error

→ you can't initialize

same variable name

twice?

Quiz 8:

```
int x = 20;
```

```
System.out.print(x);
```

```
x = 40;
```

```
System.out.println(x);
```

40
20
x

2040

→

Quiz 9:

```
int a = 10;
```

```
int b = 20;
```

```
↳ a = 20b + 30;
```

```
System.out.println(a);
```

50
~~10~~
a

20
b

! 0 = 10

LHS = RHS

↓
LHS == RHS

↳ Computer → = → assignment operator

↳ assign right side
value to left side.

* variable naming rules

1. Name can contain lowercase, uppercase alphabets or digit (0-9) or '\$' (dollar) or '-' (underscore)

2. First letter / character of the name cannot be number.

3. Can't use reserved keywords as variable name:

Reserved word: words which are already predefined in java. ex: public, static, void, int etc.

Quiz 10!

int x = 10; ✓

int 1y = 20; ✗

int y@b = 30; ✗

⇒ ans = 1

How many of above are correct variable names?

Quiz 11!

int -y = 10; ✓

int any = 20; ✓

int n a = 30; ✗

int x\$2 = 45; ✓

⇒ ans = 3

How many of above are correct variable names?

Quiz 12:

```
int Static = 60;
```

→ error

```
System.out.println(Static);
```

Different Categories of data

a) Numbers

Integers

- ↳ byte
- ↳ short
- ↳ int
- ↳ long

decimal

b) Tent

00
(10 kg)

0000
(25 kg)

000000
(50 kg)

c) boolean

true false

⇓

boolean
type

flag = false;
name

initialized
value

00000000
(100 kg)

item:

| | | | | |
|---------|-----------|----|----|---|
| 5 Kg → | ✓ (ideal) | ✓ | ✓ | ✓ |
| 75 Kg → | xx | xx | xx | ✓ |

Range / Capacity

Capacity /
range
are
different

byte

-2^7 to 2^7-1 : $\{-128, 127\}$

short

-2^{15} to $2^{15}-1$: $\{-32768, 32767\}$

int

→ $\{-2^{31}$ to $2^{31}-1\}$

-2^{31} to $2^{31}-1$: $\{-2147483648, 2147483647\}$

long

→ $\{-2^{63}$ to $2^{63}-1\}$

-2^{63} to $2^{63}-1$: $\{-9223372036854775808, 9223372036854775807\}$

Complete explanation is in Bit manipulation
Class.

↳ The default value is int. To initialize long you need `long a = 10000000000L`.

Boleh till 9:29 PM

↳ you didn't come this far only to come this far.

→ TypeCasting

approx

int $\rightarrow \{-2^{31} \text{ to } 2^{31}-1\} \rightarrow \{-2*10^9 \text{ to } 2*10^9\}$
long $\rightarrow \{-2^{63} \text{ to } 2^{63}-1\} \rightarrow \{-2*10^{18} \text{ to } 2*10^{18}\}$

ex1: int n = 100

long y = n; \rightarrow implicit

System.out.println(y);

ex2: long n = 1000;

explicitly \leftarrow int y = (int)n;

System.out.println(y); \rightarrow 1000

1000
n

1000
y

Quiz 13

```
int a = 10000;
```

```
long b = a;
```

```
System.out.println(b);
```

6 10000

Quiz 14:

```
long a = 1000000; → int y = (int)a
```

```
int y = a; → TypeCast?
```

```
System.out.println(y);
```

Quiz 15:

```
long a = 1010;
```

```
int b = (int)a;
```

```
System.out.println(b);
```

10¹⁰
a

random
value
↓
b
int

* reading Inputs

```
↳ Scanner namescn = new Scanner(System.in);  
    int n = scn.nextInt();  
    System.out.println(n);
```

Quiz 16:

input: 30

```
Scanner scn = new Scanner(System.in);
```

```
int n = scn.nextInt();
```

```
System.out.println(n);
```

↳ error

(small s in System)

Quiz 17:

input: 30

```
Scanner scn = new Scanner(System.in);
```

```
int n = scn.nextInt();
```

```
System.out.println(n);
```

↑ small s

↳ error

Quiz 18:

input: 30

```
Scanner scn = new Scanner(System.in);
```

```
int n = scn.nextInt();
```

```
System.out.println(n);
```

↳ 30

Quiz 19:

input: 24 30

```
Scanner scn = new Scanner(System.in);
```

```
int x = scn.nextInt(); ← 24
```

```
int y = scn.nextInt(); ← 30
```

```
System.out.println(x); → 24
```

Quiz 20:

input: 24 30

```
Scanner scn = new Scanner(System.in);
```

```
int x = scn.nextInt();
```

```
int y = scn.nextInt();
```

```
int z = scn.nextInt();
```

```
System.out.println(x+y+z);
```

↳ error

↳ Done with today's class

Quiz 21:

```
float x = 3.4f;  
double y = x;  
System.out.print(y);
```

Quiz 22:

```
int x = 40;  
double y = x;  
System.out.print(y);
```

Quiz 23:

```
double x = 3.45;  
int y = x;  
System.out.print(y);
```

→ error
